

Alcohol, Tobacco & Other Drug Abuse Among Delaware Students 2006

FINAL REPORT

To:

The Delaware Health Fund Advisory Committee and
The Division of Substance Abuse and Mental Health,
Department of Health and Social Services
April, 2007

Prepared by the Center for Drug & Alcohol Studies
University of Delaware.

Since 1999 the survey has expanded on the sample used in previous years and attempted to interview most 5th, 8th, and 11th graders in the Delaware public schools. The survey was conducted from January into June, 2006 as an anonymous classroom administration, using a form that could be completed in no more than one class period. Classroom administrations were conducted by University of Delaware personnel, rather than by teachers, to reduce teacher burden and to help increase students' perceptions that the results were not seen by school personnel. Classroom administrations were coordinated with two other surveys administered in Delaware Schools asking about substance use: the Centers for Disease Control and Prevention (CDC) Youth Risk Behavior Survey (YRBS), which is administered in odd years and the CDC's Youth Tobacco Survey (YTS) which is administered in even years. This coordination ensures that no classroom has to complete more than one survey in any year. Parents were informed about the survey and given the opportunity to decide if their child should not participate. Students also got to choose whether to participate. Only a very small number of parents or students chose not to participate. All consent procedures were reviewed and approved by the University of Delaware's Institutional Review Board. The numbers of completed interviews, after excluding any students who reported using a fictitious drug (included as a question) or who otherwise obviously falsified their answers, were 5,636 11th graders, 7,436 8th graders, and 7,827 5th graders.

SAMPLE DESCRIPTION -- DELAWARE SCHOOL SURVEY 2006

	FIFTH GRADE (N=7,827)	EIGHTH GRADE (N=7,436)	ELEVENTH GRADE (N=5,636)
GENDER (%)			
Males	51%	49%	49%
Females	49%	51%	51%
ETHNICITY (%)			
White	41%	53%	60%
Black	30%	28%	25%
Latino	10%	8%	6%
Other	19%	11%	9%
COUNTY (Ns)			
New Castle	4,582	4,184	3,233
Kent	1,775	1,710	1,390
Sussex	1,369	1,542	1,012

Important Footnote to the Trend Graphs and Tables of Delaware Students' Report of Monthly or Regular Use:

⇒ The data from the 1989 - 1994 PAUS Survey, administered for the Delaware Department of Public Instruction (DPI), come from responses to the questions: "How often do you usually use (or have ever used) each of:

Cigarettes

Alcohol (beer, wine, liquor, coolers)

Marijuana (grass, pot, hash, weed)"

With response categories: (never), (once or twice before but not again), (about once or twice a year), (about once or twice a month), (about once or twice a week), and (almost every day). Responses of (about once or twice a month) or more often are considered monthly or regular use.

⇒ The data from the 1995 - 2006 University of Delaware Surveys for 5th graders come from responses to a question similar to that used in the PAUS survey. The data for 8th and 11th graders are different. They come from the questions used in the national Monitoring the Future Surveys (MTF):

"In the past month,

how many cigarettes have you smoked

how many times have you had a drink (not just a few sips) of alcohol
(beer, wine, liquor, mixed drinks)

how many times have you smoked marijuana (grass, pot, hash, weed)

⇒ Responses of one full cigarette and one time or more are coded as regular use.

In both the PAUS and UD surveys, any student who reports use of a fictitious drug (in 2006 "dactyls") is excluded from the analysis.

Nationally, use of marijuana by youth escalated dramatically between 1993 and 1995. It increased even more dramatically in Delaware; however, the change in wording after 1995 may explain part of the increase in drug use shown in the figures from 1994 to 1995. This is particularly true for the 8th graders, if one assumes that past month use may be experimental and not indicative of what one "usually uses." This means the 1995-2006 question may be measuring past month use rather than past month regular use. And the Delaware estimates for 1989-1994 may actually underestimate past month use, as measured in the national MTF and National Household surveys. The question format has been consistent since 1995.

III. For Each of 5th, 8th, and 11th Graders:

2006 Estimates by Gender and County of Lifetime, Past Year, Past Month, and Recent Heavy Use of Tobacco, Alcohol, Inhalants, and Marijuana and Estimates of Perceived Harmfulness of Each Substance

Estimates by Gender and County of Use of Other Illegal Drugs
