Delaware Adult Alcohol Use Parallels U.S. Rates

Perhaps unexpectedly to most people, alcohol use increases with education level and with income level. In 2012, Delaware’s rates of alcohol use by education and income closely paralleled national rates with the exception of lower SES adults with less than a high school education and with an income of less than $15,000. In these cases Delaware’s rates were higher than national norms.

Funding for this project has been provided by the Department for Health and Social Services, Division of Substance Abuse and Mental Health- State of Delaware through a gram from the Substance Abuse and Mental Health Services Administration (SAMHSA, SP015607)
