DOMIP Interactive Mapping App Tutorial

The DOMIP app’s home page shows the most recent (i.e., 2017) overdose death rates in Delaware’s 214 US Census Tracts. The box on the upper left corner of the page shows the legend, describing the respective rate ranges associated with the colors of the census tracts.

Navigation:

Click and drag areas on the map to see relevant information for the areas of your choice. In order to zoom in and out, either click on + and – icons located directly to the right of the legend, or scroll using your mouse wheel. The search button also allows you to type in a specific address within Delaware.
Toggling between community areas:

Different filters for geographic or political areas are located in the upper left corner of the legend. Simply select the desired area you want (e.g. census tract, zip code, Delaware house district, or county) as well as the year you would like displayed.

When selecting an area, keep in mind that only one layer is capable of being visible at a time. However, the “community resources” pins (e.g. methadone clinics) may be overlaid onto area layers (see below).
These resource pins display the locations of various assets (e.g. methadone clinics) available to communities throughout the state.

By clicking on a specific area type within the state, a box will pop up which contains a variety of metrics to describe it.

You can scroll within the pop up to view the array of metrics provided. Also, clicking the arrow in the top right corner of the pop up allows you to toggle to bordering areas.
