Vaping among Delaware Students
Findings from the 2019 Delaware School Survey of Eleventh Grade Students

**Perceptions of Harm from Vaping**

- Not Sure: 11.0%
- No Risk: 12.0%
- Slight Risk: 17.0%
- Moderate Risk: 34.0%
- Great Risk: 26.0%

Most students agree that vaping presents a moderate to great health risk.

**What are students consuming in vaping devices? (%)**

- E-liquid: 21%
- Marijuana: 19%
- Nicotine: 16%
- Synthetic marijuana: 5%
- Other drugs: 4%

*Note: This is a mark-all-that-apply question, so students may report using more than one of these substances.

Vaping is far more prevalent than cigarette use.

- Among students who have ever vaped, 39% had used their first vape by the age of 15.
- Among students who report cigarette use in the past year, 100% have also used a vaping device.
- Approximately 16% of students report living with an adult who vapes at home.

Vaping is the act of using an electronic cigarette or device such as Juul to inhale vaporized e-liquid, nicotine, marijuana, or other drugs.
